

After the World War II, antibiotics were considered “wonder drugs”, since they were an easy remedy for what had been intractable ailments. To learn which drug worked most effectively for which bacterial infection, performance of the three most popular antibiotics on 16 bacteria were gathered.

- Bacteria
- ◇ Aerobacter aerogenes
 - ◇ Brucella abortus
 - Brucella anthracis
 - △ Diplococcus pneumoniae
 - Escherichia coli
 - × Klebsiella pneumoniae
 - + Mycobacterium tuberculosis
 - △ Proteus vulgaris
 - * Pseudomonas aeruginosa
 - × Salmonella (Eberthella) typhosa
 - ▽ Salmonella schottmuelleri
 - + Staphylococcus albus
 - Staphylococcus aureus
 - * Streptococcus fecalis
 - ▽ Streptococcus hemolyticus
- Gram-Staining
- negative
 - positive
